***Acknowledgement***

Receipt is acknowledged of the Amendment filed February 22, 2005.

***Reasons for Allowance***

Claims 1-21 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, Nguyen, taken alone or in combination of other references, does not teach or fairly suggest a programmable logic device comprising, among other things, at least one programmable I/O buffer (PIB) that can be programmed to support three or more of a double data rate (DDR) input mode, one or more demux input modes, one or more DDR demux input modes, and one or more additional input modes that do not involve any demultiplexing or DDR-to-SDR conversion, where the one or more demux input modes are different from the DDR input mode (claims 1 and 15, and similarly with claim 16); a transfer stage that is driven by a system clock signal corresponding to the time domain of the logic core (claim 17); demultiplexing circuitry coupled to the DDR circuitry and programmable to demultiplex each of the two SDR data signals into two or more lower-rate SDR data signals (claim 20); and multiplexing circuitry programmable to multiplex four or more outgoing single data rate (SDR) data signals into two higher-rate SDR data signals (claim 21), as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
